JULIET ADA ADUE

Frontend Engineer — React & TypeScript

Abuja, Nigeria | Open to relocation to Canada (VanHack) | okpejuliet08@gmail.com
github.com/AJ-22-max | juliet-adue.vercel.app

SUMMARY

Frontend engineer with 3+ years building production SaaS in React and TypeScript, most recently at BMG since January 2026, and previously at Advanztek Nig. Ltd. Owns features end to end — interaction design, UI, state and data-fetching, through to QA and client feedback. Currently builds a multi-tenant CRM and commerce platform serving businesses across invoicing, e-commerce, project management and marketing automation, plus the public marketing sites in front of it. First Class degree in Aerospace Engineering. Fully remote-work experienced and open to relocating to Canada.

TECHNICAL SKILLS

Frontend: React 18/19, TypeScript, JavaScript (ES2022), HTML5, CSS3, Vite, React Router, Material UI (MUI), Tailwind CSS, Emotion, styled-components, Framer Motion

State & Data: TanStack Query (React Query), Context API, Axios, REST APIs, dnd-kit

Backend: Node.js serverless functions (Vercel), PostgreSQL (Neon), REST API design, authentication, file uploads, payment integration (Paystack webhooks), custom CMS/admin dashboards

Tooling: Git, GitHub, ESLint, npm, Vite

Practices: Responsive web design, web performance optimization, accessibility, code review, manual QA, cross-browser and responsive testing, defect reporting, Agile delivery

SELECTED PROJECTS

BMG CRM — Multi-tenant CRM and business platform *React 18, MUI, TanStack Query, Axios, dnd-kit*
All-in-one platform for small businesses: clients, projects, tasks, invoicing, public storefront, email campaigns and WhatsApp messaging — each tenant with its own branding, currency and domain. Frontend feature ownership plus the backend behind those features.

REM Church — Full-stack church & community platform *React 19, TypeScript, MUI, Tailwind, Neon Postgres, Paystack, Vercel*
A multi-section church platform — sermons, devotionals, events, branches, livestream, gallery, news and prayer requests — with online giving via Paystack. Built the React/TypeScript frontend and the serverless backend (Neon Postgres): authentication, a content-management admin dashboard (editable homepage, media uploads, message inbox, livestream control), and Paystack giving with webhooks. Deployed on Vercel with push-to-deploy.

Virtuous Woman Couture — E-commerce storefront *React 19, TypeScript, Vite, Context API*
A premium fashion storefront: catalog with category filters, price slider, search and sorting; product pages with colour/size and made-to-measure selection; a Context-based cart and checkout; authenticated accounts (email + Google) with a protected customer dashboard (orders, body measurements, addresses, wishlist); multi-currency (£/$/C$/₦), dark mode, a custom design system, and an admin panel.

Client Web Applications *TypeScript, React, Vite, Tailwind CSS, Framer Motion*
Designed and shipped production sites for Marvel Jeb Co. Ltd, Fidei Polytechnic, Pamsette Primary School, the School Portal marketing site and BMG CRM — including data-driven pricing pages, interactive product demos and compliance pages, with load performance and accessibility as primary concerns. 25 public commits on the School Portal site.

PROFESSIONAL EXPERIENCE

BMG — Frontend Engineer
Remote | Jan 2026 – Present

Multi-tenant CRM and commerce platform for African businesses: clients, projects, tasks, invoicing, a public storefront, campaigns and messaging. Owns frontend features end to end, and designs and builds the public marketing sites in front of the product.

- Built the invoice editor for a multi-tenant CRM — stackable tax rules, brand colour theming, logo upload and live preview. The product's highest-traffic screen.
- Built the attachments system: in-browser previews for image, video, PDF and Office documents, with object-URL lifecycle management so previews of not-yet-uploaded files don't leak memory, and rich preview cards for pasted links.
- Built drag-and-drop project and task boards (dnd-kit) with multi-select assignees, date-range filtering and archiving.
- Reduced image payloads by approximately 90% while preserving transparency, and added resource hints for the media host — a measurable improvement on slow mobile connections.
- Designed the multi-currency approach for invoicing: currency derives from the business and the document rather than the viewer's location, enforced through a formatting helper that requires an explicit currency, eliminating a class of financial display bugs.
- Built the admin acquisition-channel reporting view and its data-fetching layer.
- Led a mobile UX pass across the dashboard: responsive navigation, consistent page headers, mobile-first action patterns.
- Redesigned and rebuilt both BMG marketing sites from scratch: homepage, authentication, About, documentation and pricing pages, plus a brand refresh across logo assets and the colour system. Compressed the About imagery from roughly 8.9 MB to 340 KB.

Advanztek Nig. Ltd — Frontend Developer

Remote | 2024 – 2025

Built and maintained an administrative dashboard for schools, covering student records, sessions and terms, examinations and results, and staff administration.

- ID card designer — school logo handling, per-element opacity controls, avatar placeholders, and server-side search in the issue picker.
- Session management — batched subject carry-forward on session creation, with a progress state so long-running setup stays visible rather than appearing frozen.
- Student promotion — session and term selection with old/new intake handling.
- Overview redesign — short-form class and programme cards, nickname-first class tabs.
- Mentored junior developers and supervised industrial-training students.

Independent — Freelance QA & Website Testing

Remote | 2023 – 2024

Tested websites and web platforms for clients and reported defects against them, before moving into building the products myself.

- Manual functional and exploratory testing across browsers, screen sizes and devices.
- Wrote reproducible bug reports: steps to reproduce, expected versus actual behaviour, environment, and severity, so issues could be fixed without a second conversation.
- Checked responsive behaviour, broken states and form validation, and re-tested after fixes to confirm the fix held and nothing else moved.
- Fed findings back as usability observations, not just defect counts.

EDUCATION

Air Force Institute of Technology, Kaduna — Bachelor of Engineering (B.Eng.), Aerospace Engineering, **First Class Honours**. Graduated September 2024.

EARLIER EXPERIENCE

Presidential Air Fleet — Engineering Intern | Jul 2023 – Jan 2024 · Executive Airlift Group — Engineering Intern | Sep 2022 – Nov 2022
